The History of Economic Thought Dec 18 2022 From the ancients to the moderns, questions of economic theory and policy have been an important part of intellectual and public debate, engaging the attention of some of history's greatest minds. This book brings together readings from more than two thousand years of writings on economic subjects. Through these selections, the reader can see first-hand how the great minds of past grappled with some of the central social and economic issues of their times and, in the process, enhanced our understanding of how economic systems function. This collection of readings covers the major themes that have preoccupied economic thinkers throughout the ages, including price determination and the

underpinnings of the market system, monetary theory and policy, international trade and finance, income distribution, and the appropriate role for government within the economic system. These ideas unfold, develop, and change course over time at the hands of scholars such as Aristotle, St. Thomas Aquinas, John Locke, François Quesnay, David Hume, Adam Smith, Thomas Robert Malthus, David Ricardo, John Stuart Mill, Karl Marx, William Stanley Jevons, Alfred Marshall, Irving Fisher, Thorstein Veblen, John Maynard Keynes, Milton Friedman, and Paul Samuelson. Each reading has been selected with a view to both enlightening the reader as to the major contributions of the author in question and to giving the reader a broad view of the development of economic thought and analysis over time. This book will be useful for students, scholars, and lay people with an interest in the history of economic thought and the history of ideas generally.

Economics and Performativity Jan 15 2020 Economists do more

than merely describe an external economic world. They shape it in the image of their theories and models. This idea, following the philosophy of language, puts forward that economic theories are performative, and not only descriptive. This idea has become a powerful critique of the scientificity of economics since it removes the idea of an external world against which our description could be evaluated as truth. If any theory can become true, there are no true theories per se because there is no such thing as a pre-existing economy to describe. Is such a relativist stance a fatality? This is the question at stake in this book. Furthermore, the author asks if any theory is able to 'perform' the social reality, or are there actually some limits to performativity? For philosophers, a performative statement is a statement that cannot fail to mean something, but can fail to do what it calls for. The state of the world may or may not be changed; the performative statement may be happy or unhappy. In economic terms, this can be interpreted as: some theories change the world while some do not. This book argues that this possibility of failure, a perspective previously missing from discussions on the subject, should be at the heart of any definition of failure. Taking on the question of why some theories change the world while others do not, this volume will be of interest to those studying advanced courses on the philosophy of economics as well as those studying and researching in the areas of the philosophy of sciences and sociology of science and economics.

[A History of Ottoman Economic Thought](#) Apr 10 2022 The Ottoman Empire (1299-1923) existed at the crossroads of the East and the West. Neither the history of Western Asia, nor that of Eastern Europe, can be fully understood without knowledge of the history of the Ottoman Empire. The question is often raised of whether or not economic thinking can exist in a non-capitalistic society. In the Ottoman Empire, like in all other pre-capitalistic

cultures, the economic sphere was an integral part of social life, and elements of Ottoman economic thought can frequently be found in amongst political, social and religious ideas. Ottoman economic thinking cannot, therefore, be analyzed in isolation; analysis of economic thinking can reveal aspects of the entire world view of the Ottomans. Based on extensive archival work, this landmark volume examines Ottoman economic thinking in the classical period using three concepts: humorism, circle of justice and household economy. Basing the research upon the writings of the Ottoman elite and bureaucrats, this book explores Ottoman economic thinking starting from its own dynamics, avoiding the temptation to seek modern economic theories and approaches in the Ottoman milieu.

Torkel Aschehoug and Norwegian Historical Economic

Thought Feb 25 2021 The historical schools of economics have been neglected within the arena of economic theory since the Second World War in favour of the now-dominant classical and neoclassical schools of economic thought. As alternative frameworks re-emerge, this book offers a reevaluation of the legal theorist, economist and politician Torkel Aschehoug (1822-1909) and his historical-empirical approach to economics, a highly influential current in Norway during the last decades of the nineteenth century.

Joseph A. Schumpeter: Historian of Economics Jan 07 2022

Joseph A. Schumpeter was one of the great economists of the twentieth century. His *History of Economic Analysis* is perhaps the greatest contribution to the history of economics, providing a magisterial account of the development of the subject from Ancient Greece to the mid-twentieth century. Schumpeter's views on his predecessors have proved to be a constant source of controversy. Here individual chapters examine such disparate questions as Schumpeter's apparent disregard for the American Institutionalists, his grudging respect for Adam Smith, the perspicacity of his views of Quesnay and his preference for

Walras over Pareto. Four chapters are devoted to the early Medieval schools, neglected in all of his writings. Schumpeter's magnum opus is related to the rest of his economic output, especially his views on money and on methodology. With contributions by leading historians of economics from six countries, this volume analyses Schumpeter's contribution to the history of economics, considers its lasting significance, and uses it as a benchmark to assess the current state of the field.

A History of Development Economics Thought May 31 2021

This book explores the history of economic development thought, with an emphasis on alternative approaches in macro development economics. Given that the pioneers of development economics in the 1940s and 1950s drew inspiration from classical political economists, this book opens with a review of key classical scholars who wrote about the progress of the wealth of nations. In reviewing the thinking of the pioneers and those that followed, both their theories of development and underdevelopment are discussed. Overall, the book charts the evolution of development economic thought from the early developmentalists and structuralists, through to the neo-Marxist approach and radical development theory, the neo-liberal counter revolution, and the debate between new developmentalists and neo-liberal scholars. It ends with an assessment of the state of the field today. This book will be of interest to all scholars and students interested in the evolution of development economics.

A History of Brazilian Economic Thought Dec 26 2020 This book provides a comprehensive analysis of the evolution of Brazilian economic thought ranging from colonial times through to the early 21st century. It explores the production of ideas on the Brazilian economy through various forms of publication and contemporary thoughts on economic contexts and development policies, all closely reflecting the evolution of economic history. After an editorial introduction, it opens with a discussion of the issue of the historical limits to and circumstances of the production of pure economic theory by Brazilian economists. The proceeding chapters follow the classical periodization of Brazilian economic history, starting with the colonial economy (up until the early 19th century) and the transition into an economy independent from Portugal (1808 through the 1830s) when formal independence took place in 1822. This book is ideal for international and national scholars in social sciences, students in both undergraduate and graduate courses in economics, and any

individuals interested in Brazilian economic and intellectual history.

Great Economic Thinkers from the Classics to the Moderns Jul 13 2022 This is the opus magnum of one of the world's most renowned experts on the history of economic thought, Bertram Schefold. It contains commentaries from the series *Klassiker der Nationalökonomie* (Classics of Economics), which have been translated into English for the first time. Schefold's choices of authors for this series, which he has edited since 1991, and his comments on the various re-edited works, are proof of his highly original and thought-provoking interpretation of the history of economic thought. Together with a companion volume, *Great Economic Thinkers from Antiquity to the Historical School: Translations from the series Klassiker der Nationalökonomie*, this book is a collection of English translations with introductions by Bertram Schefold. The emphasis of this volume is on the theoretical debates, from the theory of value to imperfect completion; from money to the institutional framework of society; and from the history of economic thought to pioneering works in mathematical economics. This volume is an important contribution to the history of economic thought, not only because it delivers original and fresh insights about well-known figures, such as Marx, Stackelberg, Sraffa, Samuelson, Tooke, Hilferding, Schmoller and Chayanov, but also because it deals with ideas and authors who have been forgotten or neglected in previous literature. This volume is of great interest to those who study the history of economic thought, economic theory and philosophy, as well as those who enjoyed the author's previous volume, *Great Economic Thinkers from Antiquity to the Historical School*.

Value and Prices in Russian Economic Thought Nov 05 2021 This book explores Russian synthesis that occurred in Russian economic thought between 1890 and 1920. This includes all the attempts at synthesis between classical political economy and marginalism; the labour theory of value and marginal utility; and

value and prices. The various ways in which Russian economists have approached these issues have generally been addressed in a piecemeal fashion in history of economic thought literature. This book returns to the primary sources in the Russian language, translating many into English for the first time, and offers the first comprehensive history of the Russian synthesis. The book first examines the origins of the Russian synthesis by determining the condition of reception in Russia of the various theories of value involved: the classical theories of value of Ricardo and Marx on one side; the marginalist theories of prices of Menger, Walras and Jevons on the other. It then reconstructs the three generations of the Russian synthesis: the first (Tugan-Baranovsky), the second, the mathematicians (Dmitriev, Bortkiewicz, Shaposhnikov, Slutsky, etc.) and the last (Yurovsky), with an emphasis on Tugan-Baranovsky's initial impetus. This volume is suitable for those studying economic theory and philosophy as well as those interested in the history of economic thought.

This is an important element in all areas of his research. The second theme is in the interrelationships between economic ideas, events (or conditions) and policy issues. The book concludes by offering an assessment of the current state of the discipline indicating the advantages an historian of economics can offer as a commentator on recent developments.

History, Methodology and Identity for a 21st Century Social

Economics Oct 24 2020 This book seeks to advance social

economic analysis, economic methodology, and the history of

economic thought in the context of twenty-first-century

scholarship and socio-economic concerns. Bringing together

carefully selected chapters by leading scholars it examines the

central contributions that John Davis has made to various areas of

scholarship. In recent decades, criticisms of mainstream

economics have rekindled interest in a number of areas of

scholarly inquiry that were frequently ignored by mainstream

economic theory and practice during the second half of the

twentieth century, including social economics, economic

methodology and history of economic thought. This book contributes to a growing literature on the revival of these areas of scholarship and highlights the pivotal role that John Davis's work has played in the ongoing revival. Together, the international panel of contributors show how Davis's insights in complexity theory, identity, and stratification are key to understanding a reconfigured economic methodology. They also reveal that Davis's willingness to draw from multiple academic disciplines gives us a platform for interrogating mainstream economics and provides the basis for a humane yet scientific alternative. This unique volume will be essential reading for advanced students and researchers across social economics, history of economic thought, economic methodology, political economy and philosophy of social science.

Theory of Economic Development in the History of Economic Thought Sep 15 2022

Richard Cantillon Dec 14 2019 Richard Cantillon was an eighteenth-century merchant. His only surviving work, the *Essai sur la nature du commerce en general* was an astonishing

achievement: the first analysis of the economy as an interrelated whole. Simply to sketch such a theory would have been a major advance, but Cantillon worked out the implications of his model with a rigour that was not to be matched for a century or more. Although it was not published until twenty years after his death, and was never widely known, it was a formative, if unacknowledged, influence on classical economics. This book is a study of Cantillon's economics. The first part of the book sets out Cantillon's theory, starting with his account of allocation and distribution in a closed economy, his theory of population, and his (land based) theory of value. It then deals with his monetary theory and his analysis of the balance of trade, and concludes with an examination of his mercantilist views. Mercantilism has been regarded as irrational ever since Smith's attacks on it, but Cantillon's views are shown to be a logical consequence of his pioneering analysis of the workings of the international economic system. The second part of the book sets Cantillon in the context of the development of economic thought in the seventeenth and eighteenth centuries, and shows that he took less from his predecessors than has been thought, and gave more to his successors than they were willing to admit. This book will appeal to those interested in the history of economics and in economic theory.
