Only 16 % of surgical consultants feel that junior doctors are appropriately educated in regard to IV fluid prescribing. NICE in december 2013 introduced a guideline for intravenous fluid therapy which was later updated as well. Methods: We audited the practice of prescribing IV fluids in our hospital against the 10 standards of NICE guideline. We randomly selected 40 adult inpatients (20 medical and 20 surgical) who were on intravenous fluid therapy for atleast 24 hours. Medical and nursing notes and prescription charts were assessed as to their compliance with audit standards. Results The compliance of IV fluid therapy was found to be very poorly

compliant with NICE guideline. Only 29 % of 10 standards were found to be >90 %. Few recommendations were made based on the results. We decided to develop new IV fluid policy for our hospital. We planned to put together teaching sessions for junior doctors and nursing staffs. We decided to develop more user friendly IV fluid chart integrated with current drug chart. All IV fluids need to be infused via pump. We developed a task team to implement all these recommendations. After a series of meeting including Anaesthetist, medical team, nurses and pharmacy, we managed to accomplish all action plan.

**Conclusions:** Intravenous fluid therapy is very important part of treatment of patients in hospital. Auditing the practice of IV fluid therapy helps in improving the standards. The Unofficial Guide to Prescribing lays out the practical steps of how to assess, investigate and manage a patient, with a focus on what to prescribe and how to prescribe it. Its aim is to empower newly graduated junior doctors to excel at dealing with emergencies and handling complex prescribing scenarios. Prescribing errors cost healthcare systems millions annually, so early training in prescribing has become an urgent priority of medical education and now forms an essential part of teaching and assessment. The Unofficial Guide to Prescribing (from the same stable as The Unofficial Guide to Passing OSCEs) is a new book designed to address this requirement. It is written by junior doctors still close to the transition from theory to practice, overseen by a review panel of senior clinicians to ensure accuracy, and designed to help medical students practise and learn as much as possible about prescribing, in actual clinical scenarios, before they have to do it for real. Each scenario is presented as you would see it in the hospital setting and covers: Initial step-by-step assessment of the patient: how to assess, assessment findings, and immediate management Initial investigations Initial management Reassessment Treatment Handing over the patient 'Prescribe' alerts throughout Written-up drug charts Blank drug charts for copying and practice Textbook of nursing practice and patient care in renal nursing. A general handbook covering post-surgical complications across all specialties. Particularly relevant for junior doctors and those preparing for their membership of the Royal College of Surgery (MRCS) exams. Geared specifically to LPNs/LVNs, this quick-reference pocket guide provides clear explanations of difficult, challenging concepts and techniques in I.V. therapy. Topics covered include I.V. site selection, solutions, equipment, I.V. therapy initiation and maintenance, site care, peripheral I.V. therapy, complications of peripheral I.V. therapy, troubleshooting, monitoring blood component therapy, parenteral nutrition, and chemotherapy.
