During confined flow of bulk solids in silos some characteristic phenomena can be created, such as: sudden and significant increase of wall stresses, different flow patterns, formation and propagation of wall and interior shear zones, fluctuation of pressures and, strong autogenous dynamic effects. These phenomena have not been described or explained in detail yet. The main intention of the experimental and theoretical research presented in this book is to explain the above mentioned phenomena in granular bulk solids and to describe them with numerical FE models verified by experimental results. *Mail Lemon-Aid shows car and truck buyers how to pick the cheapest and most reliable vehicles from the past 30 years of auto production. This brand-new edition of the bestselling guide contains updated information on secret service bulletins that can save you money. Phil describes sales and service scams, lists which vehicles are factory goofs, and sets out the prices you should pay. As Canada's automotive "Dr. Phil" for over 40 years, Edmonston pulls no punches. His Lemon-Aid is more potent and provocative than ever. The Code of Federal Regulations is the codification of the general and permanent rules published in the Federal Register by the executive departments and agencies of the Federal Government. The popular belief that a scientific understanding of reality is incompatible with a Christian one is simply wrong. Some Christian understandings of reality do conflict with some scientific understandings. But a thoroughly rational Christian understanding of the origin and history of the universe will be informed by the best scientific theories and the "facts" founded on them. This book weaves a narrative of the origin and history of the universe from the perspective of contemporary science with a Christian understanding of God and of God's role in the origin and history of the universe. At the center of this integrated narrative is the view that God, who is pure, unbounded Love, is Creator: the zest for life in the universe comes from God, and God is the source of Truth, Beauty, and Goodness in the universe. God is amazed and delighted at what God-and-the-world has created; God is saddened by ways creatures have fallen short of pure, unbounded Love, Truth, Beauty, and Goodness; and God's pure, unbounded Love keeps on trying to persuade all creatures toward Truth, Beauty, and Goodness. This book examines the dominance and significance of lean organizing in the international economy. Scholars from each discipline see lean production as positive or negative; the book blends theory with practice by sorting out these different academic views and revealing how lean is implemented in different ways. The first part synthesizes academic research from a range of disciplines—including, engineering, sociology, and management—to present the reader with an integrated understanding of the benefits and drawbacks of lean management. The second part links this theory to practice, with a set of case studies from companies like Apple, Google, Nike, Toyota, and Walmart that demonstrate how lean is implemented in a variety of settings. The book concludes with three models, explaining how Toyotism, Nikefication with offshoring, and Waltonism provide full or less complete models of lean production. It clearly presents the positive and negative aspects of lean and insights into the culture of lean organizations. With its rich interdisciplinary approach, Framing and Managing Lean Organizations in the New Economy will benefit researchers and students across a range of classes from management, sociology, and public policy to engineering. A guide to buying a used car or minivan features information on the strengths and weaknesses of each model, a safety summary, recalls, warranties, and service tips. High-school senior Gina Corcoran lived a fairly normal life with her mother, grandmother, and brother. Once, every year or so, she would even get to leave her home in San Antonio, Texas, and spend a few weeks in the summer with her great-aunt Anna, at a small farmhouse just outside of Binghamton, New York. There she would be told stories of her family, of how they came from the Italian island of Sicily to America first to*

New York, and then, when her grandmother moved, to Texas and of her life in San Antonio. Family stories like these often have a lasting effect upon a person. The stories that she wasn't told were older, deeper, darker, and would change her life forever. This is the story of Gina, the great-niece of Anna Del Forno, the wealthy owner and CEO of Del Forno Bottling, producers of Acqua D'Arcamo, a popular, bottled water made at a plant on the grounds of the Del Forno Villa, an estate in Arcamo, Sicily. How Anna came to be the head of such a profitable company and all the abundance that came with it, at first meant very little to Gina, until of course, the legacy took hold. What some would see as a family legacy, others might view as a curse. How could Gina have possibly known what turns her life would take, when with each passing day, each startling revelation brought her closer to danger, dancing with death. Have you ever been frightened? So afraid that you could barely control your own emotions? Imagine what it would feel like if your inner fears and angers got the better of you and came out. Think of it as letting out the inner beast. Imagine, over time, being able to allow those feelings to come out whenever you needed them. Oh, and imagine that when you do, you are no longer you, but rather a fully grown wolf not a monster, not a science experiment, but a genuine, living wolf. You can think like a wolf thinks, see like a wolf sees, even hunt with the quiet tenacity in which a wolf hunts. And when you hunger, you will hunt. All this unfolds here, and more, as Gina becomes immersed in the Waters of Arcamo. How do brand names differ from other names, and what goes into making a good name great and a bad name ghastly? Knowing this can spell the difference between bankruptcy and marketplace triumph. In this indispensable guide, the authors share the secrets of successful brand names--how they've indelibly stamped cultures around the world; who makes them; why they're made; and how they're compiled, bought, sold, and protected. The book outlines what kind of names exist--the initialized, descriptive, allusive, and coined. How namers surf on brainwaves. The do's, don'ts, and nevers of naming, how the structure of names is built from the ground up and how their sounds are engineered. Why names symbolize benefits. Where in the world brands may be found, and what will become of them. Fast-paced, illustration-packed, gazing at the past and probing into the future, this is the definitive book on naming. *The Making of A Name* is the one book anyone interested in "owned words" must have. The ubiquitous »cultural turn« of the 1990s did not spare the thinkers of economics - however, at the same time, economic topics have gained a new importance in cultural studies. This volume focuses on cultures of economy in regions of former Yugoslavia as part of South-Eastern Europe, supported by theoretical perspectives. It examines narratives and poetics of economy in literature, film, and art, as well as in public discourse. The contributors spotlight different historical periods: the late 19th and the early 20th centuries, Socialist Yugoslavia and the transitional and neoliberal period since the 1990s. As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, *Lemon-Aid* guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz - rich cars, poor quality. There's only one Saturn you should buy. Toyota - enough apologies: "when you mess up, 'fess up." Earth's present-day environments are the outcome of a 4.5 billion year period of evolution reflecting the interaction of global-scale geological and biological processes. Punctuating that evolution were several extraordinary events and episodes that perturbed the entire Earth system and led to the creation of new environmental conditions, sometimes even to fundamental changes in how planet Earth operated. Volume 3: *Global Events and the Fennoscandian Arctic Russia - Drilling Earth Project* represents another kind of illustrated journey through the early Palaeoproterozoic, provided by syntheses, reviews and summaries of the current state of our understanding of a series of global events that resulted in a fundamental change of the Earth System from an

anoxic to an oxic state. The book discusses traces of life, possible causes for the Huronian-age glaciations, addresses radical changes in carbon, sulphur and phosphorus cycles during the Palaeoproterozoic, and provides a comprehensive description and a rich photo-documentation of the early Palaeoproterozoic supergiant, petrified oil-field. Terrestrial environments are characterised through a critical review of available data on weathered and calichified surfaces and travertine deposits. Potential implementation of Ca, Mg, Sr, Fe, Mo, U and Re-Os isotope systems for deciphering Palaeoproterozoic seawater chemistry and a change in the redox-state of water and sedimentary columns are discussed. The volume considers in detail the definition of the oxic atmosphere, possible causes for the oxygen rise, and considers the oxidation of terrestrial environment not as a single event, but a slow-motion process lasting over hundreds of millions of years. Finally, the book provides a roadmap as to how the FAR-DEEP cores may facilitate future interesting science and provide a new foundation for education in earth-science community. Welcome to the illustrative journey through one of the most exciting periods of planet Earth! Covers receipts and expenditures of appropriations and other funds. Explores the contemporary state of globalization, competition and growth in China. This book focuses on issues, such as foreign direct investment, international trade, reforms in the financial sector, the development of rural township and village enterprises, the investment strategies of multinational corporations, and economic growth. Car accidents, illnesses, falls, and temper tantrums that's what author Valinda Johnson was facing when she decided to become her elderly father's caregiver. In My Father's House Again shares an honest portrait of the situation facing so many baby boomers today. Valinda wondered if her dad should be in a nursing home, but he really wasn't ready. At ninety-four, he was able to dance and drive, but there was little else that interested him. But would he agree to come to live with her and her husband, Robert? After weighing all of the options, she and Robert came to the difficult conclusion that she must go to live with her

father to care for him. It was a life change not only for her but also for her husband, who stayed behind until he was able to retire. It was only nine months, but it seemed like a lifetime. When she relocated 700 miles from everything that was familiar to her, she had no idea how difficult it would be to manage without Robert. Her dad had no intention of making anything easy for her, either. If she was to help him, it would be on his terms.

The accurate measurement of ecosystem biomass is of great importance in scientific, resource management and energy sectors. In particular, biomass is a direct measurement of carbon storage within an ecosystem and of great importance for carbon cycle science and carbon emission mitigation. Remote Sensing is the most accurate tool for global biomass measurements because of the ability to measure large areas. Current biomass estimates are derived primarily from ground-based samples, as compiled and reported in inventories and ecosystem samples. By using remote sensing technologies, we are able to scale up the sample values and supply wall to wall mapping of biomass. Three separate remote sensing technologies are available today to measure ecosystem biomass: passive optical, radar, and lidar. There are many measurement methodologies that range from the application driven to the most technologically cutting-edge. The goal of this book is to address the newest developments in biomass measurements, sensor development, field measurements and modeling. The chapters in this book are separated into five main sections. For more than thirty-seven years, millions of consumers have turned to Edmunds buyer's guide for their shopping needs.
