Overview of license types

Administrators manage three types of licenses, according to the subscription type. These license types are authenticated differently.

Named user licenses, based on the customer's Autodesk Account, are automatically authenticated when the customer first runs a product after signing in to Autodesk Account.

Standalone licenses are tied to specific devices and use serial numbers. When customers first run the product, standalone licenses are authenticated either silently by Autodesk servers or when customers are prompted to enter a serial number.

Network licenses, managed with Network License Manager (NLM) software, are authenticated by pre-configured network license servers. Sometimes, customers may be asked to

give license server information when they first run a product. You can identify your license type for each product in the Products and Services section of Autodesk Account. Inequality in Education: Comparative and International Perspectives is a compilation of conceptual chapters and national case studies that includes a series of methods for measuring education inequalities. The book provides up-to-date scholarly research on global trends in the distribution of formal schooling in national populations. It also offers a strategic comparative and international education policy statement on recent shifts in education inequality, and new

approaches to explore, develop and improve comparative education and policy research globally. Contributing authors examine how education as a process interacts with government finance policy to form patterns of access to education services. In addition to case perspectives from 18 countries across six geographic regions, the volume includes six conceptual chapters on topics that influence education inequality, such as gender, disability, language and economics, and a summary chapter that presents new evidence on the pernicious consequences of inequality in the distribution of education. The book offers (1) a better and more holistic understanding of ways to measure education inequalities; and (2) strategies for facing the challenge of inequality in education in the processes of policy formation, planning and implementation at the local, regional, national and global levels.
