Recording Science in the Digital Era Feb 25 2021 For most of the history of scientific endeavour, science has been recorded on paper. In this digital era, however, there is increasing pressure to abandon paper in favour of digital tools. Despite the benefits, there are barriers to the adoption of such tools, not least their usability. As the relentless development of technology changes the way we work, we need to ensure that the design of technology not only overcomes these barriers, but facilitates us as scientists and supports better practice within science. This book examines the importance of record-

keeping in science, current record-keeping practices, and the role of technology for enabling the effective capture, reuse, sharing, and preservation of scientific data. Covering the essential areas of electronic laboratory notebooks (ELNs) and digital tools for recording scientific data, including an overview of the current data management technology available and the benefits and pitfalls of using these technologies, this book is a useful tool for those interested in implementing digital data solutions within their research groups or departments. This book also provides insight into important factors to consider in the design of digital tools such as ELNs for those interested in producing their own tools. Finally, it looks at the role of current technology and then considers how that technology might develop in the future to better support scientists in their work, and in capturing and sharing the scientific record.

Technology and Engagement Oct 24 2020 Winner of the 2018 Association for the Study of Higher Education Outstanding Book Award? Technology and Engagement is based on a four-year study of how first generation college students use social media, aimed at improving their transition to and engagement with their university. Through web technology, including social media sites, students were better able to maintain close ties with family and friends from home, as well as engage more with social and academic programs at their university. This 'ecology of transition' was important in keeping the students focused on why they were in college, and helped them become more integrated into the university setting. By showing the gains in campus capital these first-generation college students obtained through social media, the authors offer concrete suggestions for how other universities and college-retention programs can utilize the findings to increase their own retention of first-generation college students.
