Apple's exciting new Mastered for iTunes (MFiT) initiative, introduced in early 2012, introduces new possibilities for delivering high-quality audio. For the first time, record labels and program producers are encouraged to deliver audio materials to iTunes in a high resolution format, which can produce better-sounding masters. In iTunes Music, author and world-class mastering engineer Bob Katz starts out with the basics, surveys the recent past, and brings you quickly up to the present—where the current state of digital audio is bleak. Katz explains the evolution of standards for dynamic range through the present and with implications for the future. He details the new methods that Apple is developing to accept high resolution audio and shows step by step how audio engineers and producers can take advantage of them. This book is designed for all those dealing with sound, from sound engineers to music industry executives and musicians—and those aspiring to all these roles. This book will help you understand the issues around delivering high-quality environment and get all your facts straight for when you encounter resistance to good sound. Topics covered include:

- Contrasting the production of CD albums with iTunes albums
- High Resolution audio
- Dithering
- Distortion (and how to avoid it)
- Lossy Coding
- Loudness Metering
- Sound Check and how it affects our production techniques

Teaching Critical Thinking and Problem Solving to Truth-Functional Logic This volume contains the proceedings of the NATO Advanced Study Institute on "Picture Archiving and Communication Systems (PACS) in Medicine" held in Evian, France, October 14- 26, 1990. The program committee of the institute consisted of H.K. Huang (Director), Osman Ratib, Albert Bakker, and Gerd Witte. This institute brought together approximately 90 participants from 15 countries. These proceedings are the accumulation of eight years of research and development results in PACS by various dedicated groups throughout the world. The purpose of this institute was to review the most recent technology available for PACS and some clinical results. The readers should notice the remarkable advances in this field by comparing the contents in these proceedings with those in a previous institute on "Pictorial Information Systems in Medicine" held August 27 - September 7, 1984 in Braunlage/Harz, Federal Republic of Germany, and published as Vol. 19 in this series. The institute was organized according to four categories: PACS components and system integration, PACS and related research in various countries and manufacturing companies, clinical experience and research support, and participants' scientific communications. In PACS components, we included image acquisition, workstations, data storage and networking. In system integration, topics on interfaces between Hospital Information System (HIS), Radiology Information System (RIS) and PACS, clinical reports, the ACR/NEMA standard, databases, reliability, and system integration were discussed. This lecture series emphasized the technical detail and "how to" aspects.
